

CAPABILITIES + SAFETY OVERVIEW

One accountable team for the lift, the move, and the space in between.

Colorado Summit Cranes & Hauling supports complex projects with crane access, lift planning, heavy haul, industrial warehousing, BESS staging, and deployment coordination.

28-350+

TON CRANE ACCESS

20+

ACRES OUTDOOR LAYDOWN ACROSS SIX STATES

THE OPERATING MODEL

Plan. Stage. Move. Set.

The value is in the connection between the milestones. Colorado Summit brings the equipment, the warehouse, the route, and the jobsite conversation together around what the project needs next.

MAIN OFFICE
Grand Junction, Colorado

PROJECT TEAM
(303) 923-8902
projects@coloradosummitcranes.com

Built around the work—not a disconnected equipment list.

Colorado Summit supports project teams from the first scope conversation through final placement. Direct operating capability and qualified partners are evaluated around the actual load, site, route, schedule, and deployment requirements.

LIFT **Crane rental and lift planning**

Match crane access and lift planning to load details, radius, height, access, ground conditions, rigging, and schedule. Crane access is available from 28-350+ tons through the operating team and qualified partner network.

MOVE **Heavy haul and specialized transport**

Coordinate the trailer, route, permits, timing, and site access around oversized equipment and project-critical assets.

STORE **Industrial warehousing and project staging**

Receive, stage, document, and release BESS units, renewable-energy equipment, industrial components, and project materials. Colorado includes 76,000 square feet of indoor warehouse capacity, plus 20+ acres of outdoor laydown across Colorado, Wyoming, Nebraska, Iowa, New Mexico, and Utah.

COORDINATE **Full project logistics**

Keep the lift, haul, warehouse, receiving, release, and deployment schedule in one accountable project conversation.

WHERE WE WORK

Colorado operating depth. U.S. project support.

Four Colorado shops anchor the operation: Brighton, Delta, Grand Junction, and Montrose. Grand Junction is the main office. We support complex projects across the U.S.

The plan is part of the equipment.

Safety-ready work begins with useful information and clear responsibility. Site conditions, asset details, access, route, handling, and timing are reviewed before the move is committed.

01 / REVIEW

Load, dimensions, lift geometry, site access, ground conditions, route, schedule, and customer requirements.

02 / DOCUMENT

Receiving, inventory, and condition documentation help keep the asset and its next move visible.

03 / STAGE

Indoor warehouse or outdoor laydown placement is selected around the asset, access, handling, and deployment plan.

04 / RELEASE

Authorized outbound movement is coordinated with heavy haul, crane offload, site readiness, and installation timing.

PROJECT INTAKE CHECKLIST

- + Asset description, weight, dimensions, and center-of-gravity information when available.
- + Pickup and delivery locations, site access, lift height, radius, and ground conditions.
- + Target date, duration, delivery window, storage term, and deployment schedule.
- + Receiving, inventory, condition, handling, release, and customer access requirements.

REQUEST A PROJECT REVIEW

Send the asset, the site, and the schedule. Colorado Summit will help define the right lift, move, warehouse, or full project logistics path.
